Conditions of Certification

1. The fibre optic cable linking the laser output to the pilot probe shall be installed so that the minimum bend radius specified by the cable manufacturer is not exceeded.

2. The fibre optic cable shall be installed in a manner such that the cable is not subjected to strain or pulling at the entry of the optical cable into to the probe assembly.
3. Where it is necessary to monitor the process level to ensure that the optical beam is not exposed to a potentially explosive atmosphere, the devices used to monitor the level shall be intrinsically safe or classed as simple apparatus and be installed so as to provide (for EPL Ga) a fault tolerance of 2. Where the EPL required for the area of installation is lower than Ga, the reliability of the control mechanism may also be reduced. The functional safety of this arrangement has not been assessed as part of this certification and it is the responsibility of the installer / user to ensure that an appropriate mechanism is in place, commensurate with the required EPL.
4. When the probe is manufactured from Titanium, the probe shall be installed so that it cannot be subjected to impact or friction.
5. PhAT probe focusing optics must not reduce the beam diameter below 3.4mm.
6. Laser power interlocks must be set for the PhAT probe without focusing optics installed.

Method of Marking

Certificate: 2413954
Project: 80041124

Master Contract: 247499
Date Issued: 2020-09-08

Markings are to be permanent, such as engraved, etched, etc., to the surface of the equipment, or printed, etched, etc., onto a metal nameplate which is secured to the equipment with drive-pins, rivets, or similar engaging bottomed holes in the enclosure. If an adhesive label is used, it must be CSA approved (US certification also requires UL Recognition) for the specific surface material and/or coating, having a rated temperature appropriate for the equipment, and be suitable for indoor/outdoor applications (as required).
